Roy Bar

Senior Frontend & Full-Stack Engineer

I build the tools other people click — and lately, the agents that test them.

Six years building multi-brand e-commerce platforms end to end — React and Next.js storefronts and the C#/.NET services behind them. I specialise in the systems non-engineers operate: experimentation, content targeting, and the backoffice systems behind catalog, pricing and merchandising. Lately I spend as much time building agents and internal AI tooling as features.

AI & AGENTIC ENGINEERING

- **Claude Code** — My daily driver. Agentic development as the normal workflow — custom skills, hooks and subagents, with MCP servers wired into the tools we already use.
- **Autonomous UI QA agent** — Drives the product in a real browser, walks the critical flows and reports regressions with screenshots.
- **Cross-repo knowledge graph** — AST-derived graph across 20 services with semantic search, so “where is this used?” is a query rather than an afternoon of grepping.
- **Agent-maintained runbooks** — Our release and QA procedures encoded as reusable agent instructions — which the agents then update after each run, so the next one starts smarter.
- **Spec-first delivery** — Behavioural specs written and reviewed before code. Agents do the exploration and the first draft; the design stays mine.

WHAT I BUILD

- **Experimentation platforms** — A/B testing end to end: dashboard, setup wizard, traffic allocation, GrowthBook integration, and a results page that reads the statistics back in.
- **Content targeting** — Audience, geography, device and cart-based page targeting; variant priority, drafts and publishing; optimistic locking so two editors can't overwrite each other.
- **Storefront platforms** — Category, product, cart and checkout for eight brands across multiple markets — a legacy storefront, the Next.js platform that replaced it, and the .NET APIs retiring what's left.
- **Backoffice systems** — The admin side of commerce: catalog and pricing operations, multi-currency overrides, crossed-price validation and draft/publish workflows — plus the C# services behind them.
- **Design systems** — Design tokens and per-brand theming that turn diverging brands into configuration instead of code paths.
- **Measurement** — GA4 and a Tag Manager data layer built from scratch, an event taxonomy across the funnel, SEO structured data and client-side observability.
- **International commerce** — Server-side geo-localisation, locale and currency selection, per-market configuration — the work that opens new markets.

EXPERIENCE

Tenengroup

Tel Aviv · Feb 2020 — Present

Multi-brand direct-to-consumer e-commerce group — eight brands, multi-market, millions of sessions a month. Storefronts, content platform and backoffice tools all built in house.

Senior Frontend & Full-Stack Engineer — Sep 2021 — Present

Own three product areas end to end across a React admin app, a Next.js storefront and three .NET services — writing the C# behind my own React when the feature needs it. De-facto frontend reviewer, and author of the product's user guides.

Technical Solution Engineer — May 2020 — Sep 2021

Production SQL, .NET automation and Kibana dashboards for e-commerce operations across ~12 country sites. Integrated the CRM and lifecycle-messaging stack — email, SMS, referral, reviews — plus order-management and customer-care tooling.

QA Specialist (part-time) — Feb — May 2020

How I learned the system I'd spend the next six years building.

STACK

FRONTEND
React · Next.js · TypeScript · MUI · Tailwind · SCSS

BACKEND
C# · .NET · Node.js · SQL · REST

AI
Claude Code · MCP · RAG · knowledge graphs · agent design

EXPERIMENTATION
GrowthBook · Dynamic Yield · GA4 · Tag Manager

OBSERVABILITY
Datadog RUM · Elasticsearch · Kibana

COMMERCE
Multi-currency · i18n · cart & checkout · SEO

BACKOFFICE
Admin tooling · CRM & lifecycle messaging · order management

TOOLING
Git · Vite · Jest · Figma

EDUCATION

B.Sc. Computer Science

Holon Institute of Technology · 2016–2019 · 86 average. Electives in computer vision and machine learning.

LANGUAGES

Hebrew · English

SERVICE

401st Brigade, Armored Corps · 2011–2014.

OFF THE CLOCK

Tiny Bites — a feeding and sleep tracker for new parents. I built it because we needed one; it's live, free for anyone to use, and the source is public.
