SUMMARY

Senior full-stack engineer with five years building multi-brand e-commerce platforms end to end — React and Next.js storefronts plus the C#/.NET services behind them. I specialise in the systems non-engineers operate: experimentation platforms, content targeting, and catalog & pricing tools.

EXPERIENCE

Senior Frontend & Full-Stack Engineer — Tenen Group, Tel Aviv — Sep 2021 – Present

- Built the A/B testing product inside the experience-management platform end to end — experiments dashboard, setup wizard, traffic allocation, GrowthBook integration and a results page that reads analysis back into the tool.
- Top contributor to the platform repository: ~19% of all commits over the past year, ahead of every other engineer on it.
- Own cross-sell and nested-product configurators across four repositories — authoring UI, REST APIs, storefront rendering, and GA4 analytics instrumentation.
- Delivered a new catalog & pricing backoffice from zero to production: products dashboard, multi-currency tab with per-currency overrides, crossed-price validation and a draft/publish model — including the supporting C# in the pricing service.
- Lead the migration of the last legacy ASP.NET pages to Next.js: behavioural spec first, then a thin JSON API in .NET and a new React page.
- Shipped internationalisation and multi-currency work that opened a new market (UAE / AED), and handle production hotfixes on high-traffic commerce surfaces.
- Built team leverage — an autonomous UI QA agent and a cross-repo knowledge index — review ~90 pull requests a year, and author the product's user guides and release notes for non-technical teams.

Technical Solution Engineer — Tenen Group, Tel Aviv — May 2020 – Sep 2021

- Built C#/.NET automation tooling that removed manual steps from the technical support process.
- Wrote complex SQL against production data and stood up Kibana and Elasticsearch dashboards so teams could self-serve their own analytics.
- Integrated third-party pixels and APIs through JavaScript and Google Tag Manager.

QA Specialist — Tenen Group, Tel Aviv (part-time) — Feb 2020 – May 2020

SKILLS

Frontend	React, Next.js, TypeScript, JavaScript, MUI, Tailwind CSS, SCSS / CSS Modules
Backend & Data	C#, .NET, Node.js, SQL, REST APIs
Experimentation	A/B testing, GrowthBook, GA4 & dataLayer, Google Tag Manager, Datadog RUM, Kibana, Elasticsearch
Commerce	Multi-currency pricing, internationalisation, cart & checkout, catalog & merchandising, multi-brand platforms
Tooling	Git, Vite, Webpack, Jest, Figma, agentic AI development workflows

EDUCATION

B.Sc. Computer Science — Holon Institute of Technology (HIT) — 2016 – 2019

Graduated with an 86 average. Elective coursework in computer vision and machine learning.

MILITARY SERVICE

401st Brigade, Armored Corps — March 2011 to March 2014.
